DOSING FILTER AND STORAGE

We are a leading company in the production of dosing pumps and solutions for dosing and transferring any kind of chemical liquids.

We produce mechanical electric piston or diaphragm dosing pumps and accessories to be mounted on delivery and suction lines such as, back pressure valves, relief valves, Suction filters and anything else that may be necessary for the proper functioning of the pumps and the dosage system as a whole.

Complete dosing systems are created starting from the project up to realization, testing and shipping

Siamo una società leader in realizzazione di pompe dosatrici e soluzioni di dosaggio e trasferimento di liquidi chimici di qualsiasi tipo.

Produciamo pompe dosatrici meccaniche elettriche a pistone o a membrana e accessori da montare sulle linee in mandata e aspirazione come, Valvole di contropressione, Valvole di sfioro, Filtri in aspirazione e quant'altro possa essere necessario al buon funzionamento delle pompe e del sistema di dosaggio nel suo insieme.

Si realizzano sistemi di dosaggio completi partendo dal progetto fino alla realizzazione al collaudo e alla spedizione

Metering Pumps

DIAPHRAGM PLUNGER

Body in alluminum or
in TechnoPolymer

Solenoid Pumps

DIAPHRAGM

Body TechnoPolymer

ODD Pneumatic Pumps

DOUBBLE DIAPHRAGM

Body in PP,PVDF,AISI316

FILTRATION

Filtration solutions for all applications on basic and alkaline acid fluids, specific applications for swimming pools and for many industrial treatments.

Filters and filter holders in steel and plastic with attachments of all sizes also according to customer specifications.

Softeners to reduce water hardness, from household to industry Sand filters particularly suitable for application in swimming pools

POLYELECTROLYTE PREPARATION PLANT

The polyelectrolyte preparation plants are used to obtain the diluted polyelectrolyte useful for flocculation for the specific application. We supply polyelectrolyte preparers starting from the powder or emulsion polyelectrolyte.

The dimensions of the tanks from the smallest of 300 or 500 liters to the largest from 7000 to 15000lt.

We carry out a specific study of the tub for each size.

The tanks can have 1, 2 or 3 sectors and have agitators in all sectors.

The electrical panel is developed as a standard with a practical and very simple operating logic.

In order to make the production of diluted solutions with small tanks practical and simple,

DSCPUMPS has developed a dosing pump that combines dosing with agitation

Using a single electric motor, this dosing pump offers the possibility of having a fixed agitation, combined with the dosage in regulation to obtain always precise solutions.

ACCESSORIES

Pulsation damper

Back-pressure valve

Relief Valve

Calibration pot

Safety valves

for Industrial process

Filter bottom valve

Flowmeters

Materials
AISI316L - PVC
